[linkedin.com/in/kamisama](https://www.linkedin.com/in/kamisama)

Summary

Cameron has worked for leading companies such as Dutchie, GitHub, SpaceX, and Microsoft, delivering high-quality products and services in various domains and sectors. He is passionate about advancing education and research, especially at the intersection of AI and cognitive neuroscience. He holds multiple certifications and awards in these fields, as well as a double major in Computer Science and Psychology, a minor in Cognitive Science, and a Certificate of Arts and Technology from Connecticut College.

Experience

Biopsychology Teacher

Bridges Academy

Jun 2023 - Present (11 months)

Director of Information Technology Engineering

Bridges Academy

Mar 2023 - Present (1 year 2 months)

Established and managed the comprehensive IT infrastructure at Bridges Academy School, demonstrating expertise in hardware, software, and networks.

Provided responsive technical support, ensuring seamless operations and resolving IT-related issues promptly.

Fostered digital literacy and cybersecurity awareness through regular training sessions for staff and students.

Developed and enforced IT policies and procedures, establishing a strong foundation for IT governance and cybersecurity best practices.

Engineering Teacher

Bridges Academy

Nov 2022 - Present (1 year 6 months)

Develop and implement a comprehensive software engineering curriculum, emphasizing both theory and practical application, for gifted students at Bridges Academy School in Seattle.

Design project-based learning experiences that cater to students' high aptitude, challenging them to apply advanced programming concepts and creating software solutions.

Safety Team

Bridges Academy

Aug 2023 - Present (9 months)

Lead Systems Admin

Dutchie

Aug 2022 - Nov 2022 (4 months)

Identify, diagnose, and report technical problems. This includes escalating and tracking problems appropriately. Root cause analysis is essential.

Translate functional requirements into technical requirements

Establish, implement, and administer best practices. This includes systems configuration and light development as necessary.

Deliver solutions based on business requirements. You clearly set expectations and can deliver work on agreed timelines.

Act as the primary admin of one or many of our SaaS systems.

Care about our customer and employee experience and manage stakeholder expectations.

Be Curious about measuring impact and assisting with analytics requests and building reports and dashboards

Act as a steward for our key systems and create technical content to enable users with the platform.

Lead Support Systems Analyst

Dutchie

Feb 2022 - Aug 2022 (7 months)

- Develop thorough, professionally documented, data-driven systems-related projects including migrations and large overhauls or changes.
- Identify data trends displaying systems needs to determine and develop prioritized goals for the Support team.
- Prepare and present systems status' to all leadership and operations stakeholders and ensure the project is aligning with organizational goals and operating principles.
- Ensure projects remain on schedule, tested within the ticketing sandboxes when applicable, and documented to gauge impact and adoption.
- Determine and keep system projects within the determined scope, whether that be budgetary, or regarding deliverables.
- Monitor and maintain the end results of all systems changes including rolling out change management with Support Leadership.

Stanford Neurodiversity Project NNEA Panelist

Stanford Neurodiversity Project

Mar 2022 - Apr 2022 (2 months)

Project Manager

Dutchie

Aug 2021 - Feb 2022 (7 months)

- Develop thorough, professionally documented, data-driven projects.
- Analyze team data to determine team necessities and develop prioritized goals.
- Translating raw data in order to create cohesive, structured, and relevant analysis.
- Prepare and present project status to all project stakeholders and ensure the project is aligning with organizational goals and operating principles.
- Ensure projects remain on schedule, tested, and documented to gauge impact and adoption.
- Design project outlines including success markers, unique to project specifications.
- Determine and keep projects within the determined scope, whether that be budgetary, or regarding deliverables.

- Monitor and maintain the end results of all assigned projects including rolling out change management with Support Leadership.
- full-bodied project tasks, and/or delegating them to help team members achieve goals and ensure successful completion.

Panelist at Stanford Neurodiversity Summit 2021

Stanford Neurodiversity Project

Aug 2021 - Nov 2021 (4 months)

Product Support Specialist (Tier II), Customer Success

Dutchie

Jul 2021 - Aug 2021 (2 months)

- Explaining workflows and product configuration with customers.
- Troubleshooting and writing bugs for unexpected behavior for Engineering.
- Investigating discrepancies and explaining findings and paths to resolution with customers.
- Using SQL and Excel skills to create custom reports for customers.
- Assist in running incidents in cases of an outage.
- Facilitate communication between engineering and the customer.
- Troubleshoot issues with the platform, state traceability systems, 3rd party integrators, and various other external parties.
- Provide basic and targeted training as needed for customers and Tier 1 Support Specialists.
- Assist your teammates in solving new or unique problems and documenting these solutions for future accessibility.
- Identify tools for new and existing products that will assist the teams in providing efficient support.
- Assist in providing feedback to Product and Engineering with issues, trends, platform workflow optimizations, etc.

Co Director: New Technologies, Data, and Ethics

PassionNet

Jan 2021 - Aug 2021 (8 months)

- Taught a 4-week long course on AI ethics and Neuroscience to a group of Middle Schoolers
- Designed a curriculum

Computational Biology and Informatics Researcher

Connecticut College

Jan 2020 - May 2021 (1 year 5 months)

- Created Apache spark pipeline to analyze single nucleotide polymorphisms
- Used Google Cloud Life Sciences to Process, analyze, and annotate genomics
- Created algorithms to Analyze medical imaging from DICOM files in order to better identify an abnormality
- Engineered a web app to pull in digital medical records, Biometric data from wearables, and genetic info into one place
- Developed a Python application to collect and analyze EEG data

CameLAB Neuroscience Lab Research Assistant

Connecticut College

Aug 2017 - May 2021 (3 years 10 months)

PI: Jeff Moher

- Set up experiments using 3D Reach Tracker, EEG, and eye-tracking technology
- Used Matlab to analyze data

Program Mentor

Upkey

Jun 2020 - Feb 2021 (9 months)

- Mentored a group of new grads and taught them about careers and coding skills
- Hosted twice a week office hours where I answered student questions
- Assisted students in developing their networking skills
- Helped students explore opportunities in career development

Aerospace Medicine, Space Operations

SpaceX

Aug 2020 - Dec 2020 (5 months)

- Assist with SpaceX's COVID response to keep employees and crewmembers safe while keeping operations running
- Collaborate with academic institutions and/or private organizations on medical research
- Assist flight surgeons and medical fellows in research projects, data synthesis, and implementation of deliverables for Starship and Crew Dragon
- Worked with multidisciplinary teams to accomplish goals involving human spaceflight, public health, and occupational medicine involving SpaceX employees
- Collected data in occupational health surveillance and public health improvement projects for SpaceX sites
- Group: Customer Operations and Integration

Field Operations Engineering Specialist

Helping Hands Community

Jun 2020 - Sep 2020 (4 months)

- Developed the HHC website
- Created partnerships with the community
- Supported our volunteers
- Worked closely with the COO and Engineering team in order to address issues

• Worked at a company co-founded by Pedram Keyani Former, Director of Engineering at both Facebook and Uber and started by a talented group of tech folks with big hearts from Uber, Lyft, Google, WhatsApp, and Facebook who joined forces to create a platform for those able to help, to connect with those that are struggling most with the current events: the elderly, immunocompromised, and at-risk in our communities.

CSSI Section Leader & Student Mentor

Google

Jun 2020 - Sep 2020 (4 months)

- Was selected by Google to work as an algorithms TA and Student mentor for the Googles education team
- In charge of mentoring and teaching a group of 50 students
- Made sure my group had at least a 95% pass rate in their class

Backend Team Lead Engineer C19 | BayShield

Apr 2020 - Sep 2020 (6 months)

- Led a team of UC Berkeley engineers
- Took ownership of the backend team
- Was in charge of hiring new devs
- Successfully lead a team that won the Jacobs prize at UC Berkeley
- Helped engineer an app that helped supply much of central California with PPE

Technology Fellow

Nu School

Jul 2020 - Jul 2020 (1 month)

Participated in a week of training and webinars, improving soft skills as well as important processes, such as building an MVP. In the second week, I used what I had learned to lead a team from across the globe, to build an MVP, and design a prototype for our idea which helped reduce food waste. We then pitched this idea to the CEO of PersistIQ, and answered questions. After that, we continued to work on our idea as a team.

Product Management Intern

Upkey

Jun 2020 - Jul 2020 (2 months)

- Own solving a customer problem end-to-end, from strategy to execution by working directly with a full-time product managers and a team of designers and engineers
- Partner with Product Analysts and UX Research to conduct and examine direct user feedback, qualitative research, and quantitative data to define customer pain points in the website styling space.
- Develop hypotheses and drive creative, cross-functional ideation and solution discovery
- Define a set of metrics to measure customer satisfaction and business impact with the ability to analyze them and utilize them in decision-making processes
- Maintain communication with the entire team to ensure effective collaboration and transparency
- Present findings broadly to interested product teams throughout the company

Summer Science Research Institute Bioinformatics and Computational Biology Researcher

Connecticut College

May 2020 - Jun 2020 (2 months)

- Created Apache spark pipeline to analyze single nucleotide polymorphisms
- Used Google Cloud Life Sciences to Process, analyze, and annotate genomics
- Created algorithms to Analyze medical imaging from DICOM files in order to better identify an abnormality
- Engineered a web app to pull in digital medical records, Biometric data from wearables, and genetic info into one place

- Developed a Python application to collect and analyze EEG data

Software Engineer

GitHub

Aug 2019 - Jan 2020 (6 months)

- Worked on internal tools

Cyber Security and Network Infrastructure Researcher

Connecticut College

Aug 2019 - Dec 2019 (5 months)

- Conducted a 2019 audit of the college's security and infrastructure
- Setup internal bug in order to access the network from the outside
- Presented findings to the entire Computer Science department
- Created a detailed report for the Chief information security officer of Connecticut College

Lead Organizer TEDxYouth@NewLondon and Head of special events in the Connecticut College TEDx club

TED Conferences

Jul 2018 - Dec 2019 (1 year 6 months)

- Spearheads TEDxYouth@New London

Community Support Engineering

GitHub

Jun 2019 - Aug 2019 (3 months)

- An interdisciplinary role that involves machine learning
- Work with cross-functional stakeholders in Operations, Product, Engineering, and Legal to support product launches
- Develop and execute support strategies that align with product goals
- Provide operational suggestions to scale product support
- Streamline complex processes and implement workflows designed to increase efficiency

Variations 2e Article Writer

2eNews

Dec 2018 - Jun 2019 (7 months)

Wrote an article for the Variations 2E magazine (Issue 2 (Spring 2019): The 2e-Friendly Workplace) about 2E in the workplace! This took up 4 pages in the magazine and was read by people around the world

Robotics and Artificial Intelligence Lab Manager And Research Associate

Connecticut College

May 2018 - May 2019 (1 year 1 month)

- Manage the robotics labs day to day operations
- Repaired Robots
- I keep the place tidy

- assisting students with equipment

Creator

Clues Inc. Comic Books

Feb 2017 - 2019 (2 years)

I am currently creating a comic book to spread awareness and promote the positive side of having learning disabilities. Those diagnosed with specific learning disorders are found to have different gifts such as heightened visual-spatial ability and the ability to look at concepts and the world in unique ways. My goal for this is that after reading this, those with LD will have a more positive outlook on themselves, and those without LD will have a more empathetic and positive view on their non-neurodiverse colleagues.

Panelist @ VISION & LEADERSHIP 2e SYMPOSIUM 2019

The Bridges 2e Center for Research and Professional Development

Oct 2018 - Oct 2018 (1 month)

Was invited by The Bridges 2e Center for Research and Professional Development to be a Panelist at the VISION & LEADERSHIP 2e SYMPOSIUM 2019

Student Information Technology Support Assistant/Teaches Assistant

Bridges Academy

Sep 2010 - Sep 2016 (6 years 1 month)

- Helped Students with IT support needs
- Helped the director of IT backup and deploy new machines
- Displayed images in the front desk
- * Setup firewall on the school's network
- Replaced damaged hard drives and repaired hardware
- I was the Robotics class Teachers Assistant at Bridges Academy!
- I was the teaching assistant for the Career readiness summer course.
- Clean installed Operating systems
- Deployed Installations on the network

QA Engineer

Wurrly

May 2015 - Aug 2015 (4 months)

Express yourself through the power of music!

- Performed Regression Testing for Wurrly application
- HLS encoding
- Developed test strategies, plans and test cases
- Developed Automation scripts
- Took ownership of Bugs
- verifying fixes for defects
- Test and find bugs on the backend
- Track down and figure out how to replicate user reported issues
- Creates pull requests

Education

Bridges Graduate School of Cognitive Diversity in Education

M.Ed. Program in Cognitive Diversity, Education

May 2023 - May 2025

The M.Ed. Program in Cognitive Diversity is dedicated to the development of the following learning outcomes in its students. These outcomes are consistent with the latest research and best practices for meeting the needs of individuals whose cognitive profiles reveal advanced abilities and areas of challenge in learning, self-regulation, or social skills.

Term Honor: Dean's List

Bridges Graduate School of Cognitive Diversity in Education

Certificate in Twice Exceptional Education, Education

Aug 2023 - Jun 2024

Term Honor: Dean's List

Connecticut College

Bachelor's degree, Computer Science and Psychology w/ Minor in Cognitive Science and Certificate in Arts and Technology

Aug 2017 - May 2021

Licenses & Certifications

Young Expert Certification in Artificial Intelligence and Neural Networks - Bridges Academy

Badge Certification in Neural Networks - Bridges Academy

Crisis Counselor - Crisis Text Line

Student Support Network - Connecticut College

Architecting with Google Compute Engine Specialization - Coursera

VW7G9Y7KVBF3

Fundamentals of Digital Marketing - Google

V9Z ZLR V88

Student Support Network- Advanced - Connecticut College

Google IT Support Specialization - Coursera

QBP8786KGTVK

Cloud Engineering with GCP Specialization - Coursera

QU4S27ZCRDXZ

"Protecting Human Research Participants - The National Institutes of Health

2504076.

Social & Behavioral Research - CITI Program

Issued Sep 2019 - Expires Sep 2022

33549694

Machine Learning and Artificial intelligence - Bridges Academy

G Suite Administration Specialization - Coursera

KE556WEY57QK

Google IT Automation with Python Specialization - Coursera

56UX6XK93RUE

Software Engineering Virtual Experience - JPMorgan Chase & Co.

RwxFzC6vRZcnPNTM3

Cyber@ANZ Program - ANZ

J56R8sw8pxTmTaeEJ

Nu School Summer Fellowship Certificate - Nu School

Algorithms by Stanford University on Coursera - Coursera

XT8M38B6HH8E

Bachelors of Arts Psychology and Computer Science - Connecticut College

227H-DXTM-CXND

Honors & Awards

Bridges Diamond Awards - Doug Lenzini

Apr 2010

A distinction reserved for those students who model exemplary year-long commitment and service to the school community.

Bridges Diamond Awards - Doug Lenzini

Apr 2012

Bridges Diamond Awards - Doug Lenzini

Apr 2013

2020 Impact Labs Fellow - Impact Labs

Jan 2020

Computer Science Leader - Connecticut College

Aug 2017

Connecticut College Emerging Leaders

Machine Learning and Artificial Intelligence Young Expert - Bridges Academy

Jan 2017

Jacobs Design Award (C19 Bayshield) - Jacobs Design

Jun 2020

The teams had about a week to self-assemble, and just a month to develop a concept before our semesterly Design Showcase, at which each team presented their project. Each team had 3 check-in points throughout the duration of the challenge and were assigned a mentor whose personal work and skillset best aligned with the project's goal. The group of mentors included Drs. Goucher-Lambert and Hayden Taylor from Mechanical Engineering, Bjoern Hartmann in Electrical Engineering and Computer Science, and Vivek Rao, a Jacobs lecturer with a focus on human-centered design. Each mentor worked with their student teams to flesh out logistical strategies and offer an insider's perspective on the approach to each design concept.

After close judging and evaluation by our panel of experts and judges at our Design Showcase, we are thrilled to announce that the First Prize winner and recipient of the \$1000 project prize is the C19 BayShield! C19 BayShield is an emergency resource management app that connects makers producing PPE with health facilities. As of now, the C19 BayShield team has produced and helped deliver over 6300 pieces of PPE. The team is led by Tina Piracci, a Masters of Architecture student in the College of Environmental Design, but consists of over 50 members from software engineers, to marketing specialists, and community makers. They are a global effort, with team members from California to Dubai.

Ammerman Center Bridget Baird Award - Connecticut college

Apr 2021

Awarded the Ammerman Center Bridget Baird Award to the certificate student who has demonstrated excellence in research in arts and technology at Connecticut College in honor of Bridget Baird, Director 1997-2008

Top Emerging Talent Summer '21 - Pangea.app

Jun 2021

These students represent some of the most promising college students and recent grads across the world. Each student on this list has earned their place, through both their accomplishments and their potential.
